Accessibility Notes

1. Accessibility on a tablet has only been certified with VoiceOver on an Apple iPad with iOS 10.3 using Google Chrome 57.
2. The combination of Internet Explorer 11 and JAWS 17 is the only certified screen reader and browser combination. See the Curam Accessibility User Guide manual for supported text resizing and browser zoom settings.

Application Servers

Summary

The prerequisites for the application servers listed below should be consulted to determine the supported platforms for each.

Supported software	Version	Supported software minimum	Product minimum	Components 	Operating system restrictions?	Notes?

Application Servers Notes

1. See the WebSphere Application Server product site for necessary configuration information on this product. The Java version 6 (and future fix packs) supplied with the WebSphere Application Server installation is supported until fix pack 13 (8.5.5.13). WebSphere have removed support for Java 6 in 8.5.5.13. The Java version 7 (and future fix packs) which may be specified for this version of WebSphere (introduced in 8.5.5.2) is supported. The Java version 8 (and future fix packs) which may be specified for this version of WebSphere (introduced in 8.5.5.9) is supported.
2. See the Oracle WebLogic Server product site for necessary configuration information on this product. The JDK (Java Development Kit) version 8 (and future fix packs) compatible with the WebLogic Server installation is supported. Note: Oracle Database is the only database which is supported for usage in combination with Oracle WebLogic Server.
3. See the WebSphere Application Server product site for necessary configuration information on this product. The Express edition is only supported for use in the development environment to aid application design, development and testing. The Java version 6 (and future fix packs) supplied with the WebSphere Application Server installation is supported until fix pack 13 (8.5.5.13). WebSphere have removed support for Java 6 in 8.5.5.13. The Java version 7 (and future fix packs) which may be specified for this version of WebSphere (introduced in 8.5.5.2) is supported. The Java version 8 (and future fix packs) which may be specified for this version of WebSphere (introduced in 8.5.5.9) is supported.

Data Integration

Summary

IBM Curam Identity Intelligence empowers caseworkers to prevent fraud, waste, and abuse in social programs by providing them with new information that helps them when making eligibility decisions on application cases. IBM Curam Identity Intelligence integrates with the IBM InfoSphere Identity Insight product. For more information see [here](#).

Supported software	Version	Supported software minimum	Product minimum	Components	Operating system restrictions?	Notes?

Databases Notes

1. The JDBC level associated with this base RSU level is PTF UI39912 (JDBC version 3.69.66). See the DB2 for z/OS product site for necessary configuration information on this product.
2. The Express edition is only supported for use in the development environment to aid application design, development and testing.
3. Reporting: - InfoSphere Warehouse editions and features are now repackaged, see the IBM DB2 Software Announcement Letter. - DB2 for Linux, Unix and Windows 10.5 and IBM DB2 Warehouse 10.5 is supported namely: - IBM DB2 Warehouse Client for Linux, Unix and Windows 10.5 - IBM DB2 Warehouse Server for Linux, Unix and Windows 10.5 - The IBM Warehouse Administration Console was certified against IBM WebSphere Application Server 8.5. - For a list of WebSphere application server versions supported see DB2 Warehouse minimum support requirements.

Development Tools

Summary

Although technical support is not provided for any Integrated Development Environment (IDE) it should be possible to use any Java IDE for development. Support for IDEs should be sought from the relevant software vendor. The following lists those IDEs which have been tested, and the use of which is described in documentation. It should also be noted that the development of the application is restricted to the Windows platform (Windows 7 and 10) and the tools listed below have only been tested on that platform.

Supported software	Version	Supported software minimum	Product minimum	Components 	Operating system restrictions?	Notes?
Apache Ant	1.9.7	1.9.7	7.0.1		No	(1)

Reporting and Analysis Notes

1. BIRT (Business Intelligent and Reporting Tools) is an (Eclipse) open source component which provides a development and execution environment for Curam Business Intelligence (BI) content. The use of a second Eclipse instance for BIRT development is recommended as standard Curam development often requires an Eclipse version that is not compatible with the certified BIRT development environment. See the Third Party Tools Guide and BIRT Developer Guide provide for a full explanation. Curam uses the all-in-one installation. For more information please see BIRT versions and platform support

Web Browser Plug-Ins

Web Browser Plug-Ins Notes

1. Oracle JRE 8.0 is required for Microsoft Word Integration. JRE 8.0 - the most recently released version tested is JRE 1.8 u131. Available as a free download from [here](#).
2. Oracle JRE 7.0 is required for Microsoft Word Integration. JRE 7.0 - the most recently released version tested is JRE 1.7 u80. Available as a free download from [here](#).
3. Required for creating and editing Curam communication documents in Microsoft Word format.

Web Browsers

Summary

Standard Browser Support It should be noted that while every effort is made to ensure that the pages specified for the internal case worker application use standard web technologies and formats which should be compatible with all browsers, the browsers identified in the associated notes are the only ones officially supported. **Universal Access Browser Support** Universal Access has been specifically developed for public facing applications. Therefore browser support has been extended in this area. It should be noted that while every effort is made to ensure that the pages specified for the Universal Access application uses standard web technologies and formats which should be compatible with all browsers, the browsers listed in the notes are the only ones officially supported. **Other Notes:** The set of browsers listed below are not certified for support on tablet devices. The minimum recommended resolution is 1366x768. The optimum DPI setting is Normal size. Chrome, Firefox, Edge and Safari release new versions more frequently than Internet Explorer, and install updates automatically by default. IBM Cúram Social Program Management releases (V.R.M.F releases only) are generally tested on the latest version (for Chrome, Stable releases only) of these browsers available at the start of our development cycle; if tested with no issues IBM will certify that version. The pre-requisites advise the version that is certified at each new product release. If for any reason, IBM Cúram Social Program Management are unable to certify for that version, it may be necessary to revert back to a version that is previously fully certified. While IBM will support customers on newer versions of these browsers than the last certified version, they should understand that they have not been fully tested.

Supported software	Version	Supported software minimum	Product minimum	Components 	Operating system restrictions?	Notes?
Apple Safari	10.1 and future fix packs	10.1	7.0.1		No	(1)
Google Chrome	57 and future fix packs	57	7.0.1		No	(3)

Web Browsers Notes

1. This browser is supported for the Universal Access application only.
2. This browser is supported for both the Universal Access and Case Worker applications.
3. This browser is supported for both the Universal Access and Case Worker applications. Arabic (RTL) is not supported in this browser for the Case Worker Application.

Glossary

Deployment unit

Deployment Structure identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure.

- The top level of the deployment structure consists of one or more **deployment units**. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile.
- Deployment units may be further divided into deployable **components**

Desktop deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications.

Server deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications.

Agent or client deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent or client deployment units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services.

Mobile deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.

Prerequisite minimum

The minimum maintenance level that is required for the prerequisite to work with the product.

Product minimum

The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software.

Supported software minimum

The minimum maintenance level that is required for the supported software to work with the product.

Long Term Support Release	A Long Term Support Release is a recommended product level for which support, including defect and security updates, will be provided over a specified period of time.
<hr/>	
Continuous Delivery Product	A Continuous Delivery Product delivers new function to clients more frequently.
<hr/>	
Continuous Delivery Product - Long Term Support Release	A Continuous Delivery Product delivers new function to clients more frequently. Since frequent releases may not be suitable for all client environments, Long Term Support Releases provide a package that will be supported for a longer period of time.
