Installation

For full installation instructions, see the Development Environment Installation Guide at [Product Documentation and PDFs.](#)

The basic installation steps are as follows:

- Review the release notes and documentation for any prerequisite steps.
- Download and extract the contents of the .zip file to a local drive location.
- Ensure that all files in your Cúram installation are writable.
- Run the Cúram installer, which you can find in the INSTALLER folder.
- Run the appropriate build targets for your installation.

Upgrading

If you are upgrading from a previous version, the Cúram Upgrade Helper contains documentation and tools to help you to upgrade your Cúram application codebase and database. The Cúram Upgrade Guide describes the recommended process for application and database upgrades. The Upgrade Helper contains tools to assist you with implementing the upgrade, including tools to produce a schedule of required migrations for your upgrade, tools to provide information about database schema changes, and tools to generate initial SQL scripts for applying changes to your database. Download the appropriate version of the Cúram Upgrade Helper from [Merative Support.](#) You must log in to download software, request access if needed. Select Cúram Support and Software Download, enter your credentials and download the software.

Improvements, Resolved Issues and Third Party Updates

[Third Party Updates](#)

Third Party Updates

WorkItem:SPM-132586 - Update the version of the Apache derby JAR file to a later version

The Apache Derby API released under the Apache License is a pure Java relational database engine using standard SQL and JDBC as its APIs. It is used in the Cúram product as part of the client application build infrastructure.

The version of the derby library has now been updated from 10.14.2.0 to 10.14.2.0-1. The new version contains some minor defect fixes. As a result of this upgrade, the following JAR has been updated in the Cúram deliverable.

- CuramCDEJ/lib/ext/jar/derby.jar

WorkItem:SPM-132587 - Update the xmlsec library to a later version

The Apache XML Security for Java (xmlsec) library includes a mature Digital Signature and Encryption implementation. It is used in the Cúram product as part of the Axis 2 secure web services solution.

The version of the xmlsec library used by Cúram has been updated from 2.2.3 to 2.2.6. This new JAR file contains some minor bug fixes and enhancements.

As a result of this upgrade, the following changes have been made in the Java Development Environment deliverable.

- CuramSDEJ/lib/third_party_version.properties - the version of the specified xmlsec library has been updated.
- CuramSDEJ\lib\xmlsec-2.2.6.jar - the version of the JAR has been updated.

We recommend that you update any references in custom scripts and other artefacts to point to the new version of the JAR file that is specified above.

Known Issues

Please refer to the [Known Issues documented for 7.0.10.0](#).
