## Introduction

Welcome to the Cúram 8.0.3.0 iFix8 release.

This is a cumulative release that incorporates all improvements, resolved issues, and third-party updates in previous 8.0.3.0 iFix releases. For full details, see the release notes for each of the previous iFix releases online at [Release Notes](#).

For product documentation, see [Merative Support Docs](#).

## Installation

For full installation instructions, see the Development Environment Installation Guide at [Product Documentation and PDFs](#).

The basic installation steps are as follows:

- Review the release notes and documentation for any prerequisite steps.
- Download and extract the contents of the .zip file to a local drive location.
- Ensure that all files in your Cúram installation are writable.
- Run any appropriate preinstall steps outlined in the Release Notes.
- Run the Cúram installer, which you can find in the INSTALLER folder.
- Run any appropriate post-install steps outlined in the Release Notes.
- Run the appropriate build targets for your installation.

## Upgrading

If you are upgrading from a previous version, the Cúram Upgrade Helper contains documentation and tools to help you to upgrade your Cúram application codebase and database. The Cúram Upgrade Guide describes the recommended process for application and database upgrades. The Upgrade Helper contains tools to assist you with implementing the upgrade, including tools to produce a schedule of required migrations for your upgrade, tools to provide information about database schema changes, and tools to generate initial SQL scripts for applying changes to your database. Download the appropriate version of the Cúram Upgrade Helper from [Merative Support](#). You must log in to download software, request access if needed. Select Cúram Support and Software Download, enter your credentials and download the software.

### WorkItem:SPM-151781 - Specific inline configuration for a tab action menu is not working correctly

#### Issue Description:

The maximum number of inline items configured for the action menu on one tab leaked into another tab, resulting in an incorrect number of inline actions being displayed when the user switched between application tabs.

**User Interface Impact:** No

#### Steps to Reproduce:

**Prerequisite step:** Configure 3 inline items for Person home menu and 0 inline items for the Incident menu.

1. Log in as a caseworker.
2. Open a Person home page (e.g., James Smith).
3. Create a new Incident from the Person home page.
4. Check the inline action buttons on both the Person home page and the Incident tabs.
5. Issue: The inline action buttons on both Person home page and Incident tabs has 0 inline items.

#### Resolution:

The logic has been updated so that inline tab action menu configurations are scoped and applied per tab. The Person

home and Incident tabs now display their configured number of inline action buttons independently.
