Introduction

Welcome to the Cúram 8.1.3.0 iFix4 release.

For product documentation, see [Merative Support Docs](#).

[Back to top](#)

System Requirements

For information about the supported software for this release, see the [Prerequisites and supported software](#).

[Back to top](#)

Download

This release is available to download from [Merative Support](#). You must log in to download software, request access if needed. Select Cúram Support and Software Download, enter your credentials and download the software.

[Back to top](#)

Security Bulletins

Security Bulletins are now available from [Merative Support](#). You must log in to access Security Bulletins, request access if needed. Select Cúram Support and Software Download, enter your credentials, and open Knowledge Articles to see the Security Bulletins.

[Back to top](#)

Installation

For full installation instructions, see the Development Environment Installation Guide at [Product Documentation and PDFs](#).

The basic installation steps are as follows:

- Review the release notes and documentation for any prerequisite steps.
- Download and extract the contents of the .zip file to a local drive location.
- Ensure that all files in your Cúram installation are writable.
- Run the Cúram installer, which you can find in the INSTALLER folder.

- Run the appropriate build targets for your installation.

Upgrading

If you are upgrading from a previous version, the Cúram Upgrade Helper contains documentation and tools to help you to upgrade your Cúram application codebase and database. The Cúram Upgrade Guide describes the recommended process for application and database upgrades. The Upgrade Helper contains tools to assist you with implementing the upgrade, including tools to produce a schedule of required migrations for your upgrade, tools to provide information about database schema changes, and tools to generate initial SQL scripts for applying changes to your database. Download the appropriate version of the Cúram Upgrade Helper from [Merative Support](#). You must log in to download software, request access if needed. Select Cúram Support and Software Download, enter your credentials and download the software.

Improvements, Resolved Issues and Third Party Updates

[Curam Enterprise Framework](#)

Curam Enterprise Framework

DT037346, WorkItem:SPM-148276 - The calendar in the date input field shows the displays the wrong format

Issue Description:

When the date format is set to 'dd/MM/yyyy', the calendar date input field displays the selected date in the wrong format ('MM/dd/yyyy') when the chosen day is between the 1st and 12th of the month.

User Interface Impact: No.

Prerequisites:

1. Open the following files:
 1. /Development/webclient/JavaSource/curam/omega3/ApplicationConfiguration.properties
 2. /Development/webclient/components/SECCCommon/javasource/curam/omega3/ApplicationConfiguration.properties
 3. /Development/webclient/WebContent/WEB-INF/classes/curam/omega3/ApplicationConfiguration.properties
2. Update the following properties to change the date format to be dd/MM/yyyy:
 1. dateformat=dd MM yyyy
 2. dateseparator=/
3. Open /Development/EJBServer/project/properties/Bootstrap.properties
4. Update the following properties:
 1. curam.environment.default.dateformat=dd MM yyyy
 2. curam.environment.default.dateseparator=/
5. Run the server, database, and webclient builds.

Steps to Reproduce:

1. Log in as a caseworker.
2. Register a person.
3. On the Register Person wizard, navigate to the second page.
4. Navigate to a date picker input field and select a date where the day value is the 12th or lower (The 4th August 2025 or 04/08/2025, for example).
5. Close and re-open the date picker.
6. Issue: The selected date is being interpreted in 'MM/dd/yyyy' format, and the date picker is now displaying April 8th, 2025, as the selected date.

Resolution:

The calendar date input field now correctly displays selected dates in the 'dd/MM/yyyy' format, regardless of the day of the month, when this format is configured.
