---

## System Requirements

For information about the supported software for this release, see the [Prerequisites and supported software](#).

[Back to top](#)

---

## Download

This release is available to download from [Merative Support](#). You must log in to download software, request access if needed. Select Cúram Support and Software Download, enter your credentials and download the software.

## Verify Download Integrity (SHA-256 Checksums)

To ensure the integrity of your downloaded files:

1. Download the file(s) from the links provided above.
2. Generate the SHA-256 checksum for the downloaded file using a tool such as shasum or certutil. For example:
  - On Linux, run shasum -a 256 <filename> in the Terminal.
  - On Windows, run certutil -hashfile <filename> SHA256 in the Command Prompt.
3. Compare the generated checksum with the corresponding value in the table below.
4. If the checksums match exactly, the file is authentic and has not been tampered with.

## Java8

Java8 ZipName	SHA-256 Checksum

## Security Bulletins

Security Bulletins are now available from [Merative Support](#). You must log in to access Security Bulletins, request access if needed. Select Cúram Support and Software Download, enter your credentials, and open Knowledge Articles to see the Security Bulletins.

[Back to top](#)

---

## Installation

For full installation instructions, see the Development Environment Installation Guide at [Product Documentation and PDFs](#).

The basic installation steps are as follows:

- Review the release notes and documentation for any prerequisite steps.
- Download and extract the contents of the .zip file to a local drive location.
- Ensure that all files in your Cúram installation are writable.
- Run the Cúram installer, which you can find in the INSTALLER folder.
- Run the appropriate build targets for your installation.

## Upgrading

If you are upgrading from a previous version, the Cúram Upgrade Helper contains documentation and tools to help you to upgrade your Cúram application codebase and database. The Cúram Upgrade Guide describes the recommended process for application and database upgrades. The Upgrade Helper contains tools to assist you with implementing the upgrade, including tools to produce a schedule of required migrations for your upgrade, tools to provide information about database schema changes, and tools to generate initial SQL scripts for applying changes to your database. Download the appropriate version of the Cúram Upgrade Helper from [Merative Support](#). You must log in to download software, request access if needed. Select Cúram Support and Software Download, enter your credentials and download the software.

## Participant Management

### DT037262, WorkItem:SPM-145968 - Unhandled server exception thrown when registering a prospect person as a person

#### Issue Description:

Registering a prospect person as a person with an existing mailing address results in an unhandled server exception if a private address is added during the registration process.

**User Interface Impact:** No

#### Steps to Reproduce:

1. Log in as a caseworker.
2. Register a Prospect Person with details: First Name, Last Name, Date of Birth, Gender, and Mailing Address.
  1. Note: Since no private address is provided, the system inserts an 'Address Unavailable' placeholder for the private address.
3. On the Prospect Person home page, click the Register page-level action.
4. During the registration process, provide a valid private address.
5. Click Save.
6. Issue: An unhandled server exception is thrown.

#### Resolution:

The underlying issue here had to do with the removal of the private address placeholder 'Address Unavailable' when the mailing address was being inserted for the person. This meant that the primary address for the Concern Role was left pointing at a deleted address, thereby resulting in an unhandled server exception. The logic has been updated to only remove the placeholder address if the address being inserted is marked as preferred.

## Curam Modules

### [Life Event Management](#)

## Life Event Management

### DT037187, WorkItem:SPM-145889 - LifeEvents and HoldingCaseDP do not have proper error handling mechanism

#### Issue Description:

Developers were unable to handle the error that occurred when an exception was thrown during the deferred process in `curam.citizen.datahub.holdingcase.impl.HoldingCaseImpl.updateEvidence(EvidenceUpdate)`.

**User Interface Impact:** No

#### Resolution:

`curam.citizen.datahub.holdingcase.impl.HoldingCaseImpl.updateEvidence(EvidenceUpdate)` has been updated to include a new error handler specific to this API. A new hook is now available for customers to implement, which will be invoked when an exception occurs during deferred process execution.

#### Technical:

An API is provided for customers to define the actions to be taken when an exception occurs.

The following method in the hook can be implemented to handle custom error processing:

```
curam.citizen.datahub.holdingcase.impl.HoldingCaseCustomErrorHandler.handleError(String, long)
```
