Merative Social Program Management 8.0.1.1 iFix1

CONTENTS

Introduction

Welcome to the Merative Social Program Management 8.0.1.1 iFix1 release.

For more information about the product, see the product documentation at [Product Documentation and PDFs](#).

Release notes for releases from 1 October 2022 are available online at the [Merative Support Docs](#) site

Release notes for releases before 1 October 2022 are available online at the [IBM Support Portal](#)

System Requirements

For information about the supported software for this release, see the [Prerequisites and Supported Software](#).

The minimum hardware requirements for Cúram SPM development and test environments are documented in the [Hardware requirements for Cúram Social Program Management (SPM) Development and Test Environments](#) technote. (That technote is effective from v7.0.2.0 onwards.)

For information about the supported software and hardware for releases before 1 October 2022, see the [IBM Cúram Social Program Management Supported Prerequisites](#).

There are additional prerequisites for deployment of IBM Cúram Social Program Management on cloud native hosting platforms. For information about deploying Cúram on IBM Cloud Kubernetes Services (IKS) or OpenShift, see the information about prerequisite software in the IBM Cúram SPM on Kubernetes Runbook at https://merative.github.io/spm-kubernetes/prereq/prereq/

For information about prerequisites for the Universal Access Responsive Web Application and the Social Program Management Design System assets, see the PDFs at https://curam-spm-devops.github.io/wh-support-docs/spm/pdf-documentation

Installation

This 8.0.1.1 iFix1 release can be installed on top of the following Cúram release:

- 8.0.1.1

Before you run the installer, ensure that all files in your Cúram installation are writable.

The installation steps are as follows:

- Extract the contents of the .zip file to a local drive location.
- Run the Cúram installer, which you can find in the INSTALLER folder that is in the extracted folder from the previous step.
- After installing the release, you must run the appropriate build targets as necessary for your installation.

You can see additional installation instructions in the [Installing IBM Cúram Social Program Management](#) topic.

Upgrading

If you are upgrading from a previous version, the Cúram Upgrade Helper contains documentation and tools to help you to upgrade your Cúram application codebase and database to work with your new version of Cúram. The Cúram Upgrade Guide describes a recommended process for performing application and database upgrades. The Upgrade Helper contains tools to assist you with implementing the upgrade, including tools to produce a schedule of required migrations for your upgrade, tools to provide information about database schema changes and tools to generate initial SQL scripts for applying changes to your database.

You can download the lastest version of the Cúram Upgrade Helper from https://ibmwatsonhealth.force.com/mysupport/s/?language=en_US.

Improvements, Resolved Issues, Third Party Updates

[Curam Enterprise Framework](#)

Curam Enterprise Framework

PO07831, WorkItem:SPM-126283 - External login mechanism called incorrectly for internal system users like SYSTEM, WEBSVCS, and Public Citizen

Issue Description:
The system property 'curam.security.altlogin.enabled' allows an external authentication system to be used. When this property is enabled, the external login mechanism PublicAccessSecurity.getRegisteredUsername is called for all users, including internal system users such as SYSTEM, WEBSVCS, and Public Citizen. This behavior is incorrect. The external login mechanism should not be called for internal system users.

User Interface Impact: No

Prerequisite(s):

1. Set the 'curam.security.altlogin.enabled' property to true.
2. Implement a class that extends the core class 'curam.core.sl.impl.PublicAccessSecurity'.
3. Update the property 'curam.custom.externalaccess.implementation' to point to the new class.

Steps to Reproduce:

1. Log in to the application as an internal user and observe the execution in the new class.
2. Issue: The external login implementation class is called for internal users.

Resolution:
This is now resolved by adding a check that prevents the call to the alternative login mechanism for a configured set of internal system users. A list of the names for these users is defined in a new system property 'curam.security.default.system.users'.
