Introduction

Welcome to the Merative Social Program Management 8.0.2.0 iFix7 release.

This is a cumulative release that incorporates all improvements, resolved issues, and third-party updates in previous 8.0.2.0 iFix releases. For full details, see the release notes for each of the previous iFix releases online at [Release Notes](#).

For product documentation, see [Merative Support Docs](#).

System Requirements

For information about the supported software for this release, see the [Social Program Management Prerequisites](#).

[Back to top](#)

Download

Download instructions for this release can be found at [Social Program Management support](#).

[Back to top](#)

Security Bulletins

Security Bulletins are now available from the [Merative Software Downloads](#), under Knowledge Documents. You must be a technical contact to access this site, see [Social Program Management support](#) for details.

[Back to top](#)

Installation

For full installation instructions, see the Development Environment Installation Guide at [Product Documentation and PDFs](#).

The basic installation steps are as follows:

- Review the release notes and documentation for any prerequisite steps.
- Download and extract the contents of the .zip file to a local drive location.
- Ensure that all files in your Social Program Management installation are writable.
- Run the Social Program Management installer, which you can find in the INSTALLER folder.
- Run the appropriate build targets for your installation.

Upgrading

If you are upgrading from a previous version, the Cúram Upgrade Helper contains documentation and tools to help you to upgrade your Cúram application codebase and database. The Cúram Upgrade Guide describes the recommended process for application and database upgrades. The Upgrade Helper contains tools to assist you with implementing the upgrade, including tools to produce a schedule of required migrations for your upgrade, tools to provide information about database schema changes, and tools to generate initial SQL scripts for applying changes to your database. Download instructions for the latest version of the Cúram Upgrade Helper are available from [Social Program Management support](#).

[Widgets](#)

DT036620, WorkItem:SPM-126593 - Page parameters are not passed correctly when a modal opens another modal

Issue Description:

When a modal passes more than one page parameter to a second modal, only the first page parameter is named correctly when received by the called modal.

User Interface Impact: No

Prerequisite

A customised modal that passes two parameters to a receiving modal, the second parameter being 'caseID'

Steps to Reproduce:

1. Navigate to the customised prerequisite page.
2. Open a modal, trigger the action to pass two parameters to a second modal. The second parameter being 'caseID'.

3. Issue: The first parameter is correctly passed but subsequent page parameters are incorrectly named e.g. "amp;caseID" instead of "caseID"

Resolution:

When a modal passes multiple page parameters to a second modal, all parameters are named correctly when received by the called modal.

Widgets

DT036344, Workitem:SPM-125989 - Cleared dropdown default values reappear after a search

Issue Description:

If default and blank values are used for search input fields, after performing a search the search criteria revert to the default values. This is confusing for the user as the search criteria do not appear to match the results returned.

User Interface Impact: No

Prerequisites

Input fields on a search page have USE_BLANK="true" and a default value set using the USE_DEFAULT="true".

Steps to Reproduce:

1. Login as a caseworker.
2. Navigate to the search page detailed in the prerequisites.
3. Change the default search criteria values and perform a search.
4. Issue: The correct search results are returned but the search criteria revert to the default values.

Resolution:

The default input criteria values are displayed initially and if a search is done using different inputs the search criteria persist when the search result are returned.
